ABOUT GRI-ALLESET

DELIVERING PRODUCT SOLUTIONS™

GRI-Alleset is your “one-stop shop” for the widest variety of self-manufactured surgical disposable products. At the same time other companies are rationalizing their product offering, GRI-Alleset approaches each market and its customers with one question in mind ... “What is essential to the healthcare provider?”

As a wholly-owned subsidiary of Global Resources International, Inc. (GRI), a market leading medical device manufacturer, the mission of GRI-Alleset is to develop and deliver high-quality, cost-effective product solutions to healthcare providers and supply chain partners as a means to improving the value proposition across the global healthcare marketplace. Initiating at product ideation and development, through a wide variety of manufacturing capabilities, and offering several cost-effective distribution options, we maintain control of cost and quality throughout the entire product lifecycle.

As an organization we pride ourselves on delivering “true value” - The perfect combination of quality products, competitive pricing, and unparalleled support services.

Reducing Risks
- Head-to-toe protection for clinicians and patients
- Barrier fabrics that leverage the latest, most advanced protective technologies
- Innovative design features that maximize risk prevention

Striving For Better
- Innovative designs that help provide superior protection and performance while controlling cost
- Solutions that match the needs of the latest surgical methods, technologies and equipment
- Flexibility to customize solutions based on the evolving needs of surgeons and clinicians worldwide

Affording The Best
- Self-manufactured solutions versus leveraging middle-men or “brokers”
- Vertically integrated solutions – from design to manufacturing to sterilization
- Optimally designed manufacturing and supply solutions minimize costs within the production process

GRI-Alleset’s ComfortGuard® Surgical Gowns have considered every element of the surgical gown as an opportunity to improve performance. From the unique formation of our fibers to the innovative design of our sleeves, we have built our gowns from the ground up with the challenges of different surgical procedures in mind.

**PROTECTION**
Excellent barrier and strength properties help protect clinicians from bodily fluids. Low flammability and low lint help eliminate one source of post-operative patient complications.

**COMFORT**
Excellent breathability created by advanced fabric technologies and innovative design, utilizing a lightweight, highly breathable cool-back panel to maximize comfort. Soft fabrics feel comfortable and stay quiet.

**FIT**
Generous cuts with raglan and set-in sleeves and pleats on the back provide increased range of motion. Added gown length improves lower-body protection. Extra long hook-and-loop creates a more customized fit around the neckline. Extra soft, extended cuffs enhance comfort.

**SUSTAINABILITY**
Innovative cool-back feature provides the comfort you demand, while helping reduce fossil fuels and carbon footprint by up to 20%. While your doctors take care of their patients, we are doing our part to ensure efficient and responsible manufacturing processes.
GRI-Alleset understands that every cut and stitch in surgery is critical. This is why we apply the same thinking to the design and construction of our surgical gowns.

GRI-Alleset’s ComfortGuard® Surgical Gowns provide all the protection needed, paired with comfort and fit that hours of surgery demands. For every clinician and for each procedure performed. ComfortGuard® Surgical Gowns deliver superior performance at maximum value throughout our product line.

**Breathable Protection**
Triple-density materials transfer heat out of the garment while keeping fluids from getting in.

**Fiber-Perfect Softness**
Superior flex, strength, and fine fibers create a unique soft construction for unrivaled comfort.

**Protective Length**
Full coverage with low movement drag and maximum comfort.

**Cool Back Panel**
Unique design combination of protection and ventilation.

**Generous Hook-and-Loop**
Secure hook-and-loop aids donning, enhances fit, and maximizes comfort.

**Surgical-Fit Cuffs**
Extended length and unique construction ensure a better fit and softer feel.

**Full-Range Sleeves**
Raglan or Set-In design gives full range of motion in any position.

Reinvention of the surgical drape means that every millimeter presents an opportunity to improve performance and in turn, improve success during surgery. GRI-Alleset’s SteriGuard® Surgical Drapes are meticulously designed to provide optimal ease of use and unmatched surgical site isolation. Design customization capabilities provide flexibility to fulfill the complex needs of every procedure.

**PROTECTION**
Advanced non-woven fabric technologies are leveraged to deliver excellent barrier, strength, durability, and adhesion properties, protecting against infection. Low lint properties help eliminate one source of post-operative patient complications. Flame resistant and anti-static treatment help prevent potential source ignition.

**SURGICAL EDGING**
GRI-Alleset’s EdgeGuard technology provides adhesive edging to maintain surgical site isolation and ensure drapes stay in place during surgery. 2 in / 5 cm medical tape provides improved drape placement and drape security.

**ABSORBENCY**
GRI-Alleset’s HydraGuard® advanced absorbency and barrier fabric provides superior management of blood and bodily fluids. Precision placement and integration of HydraGuard® materials ensures that high-absorbency needed areas are fully covered.

**EASE OF USE**
Intuitive designs with unfolding instructions clearly stamped on each drape provide assistance in the draping process. Soft and pliable fabrics and adhesive materials increase ease of application and improve drapability.
GRI-Alleset’s SteriGuard® Surgical Drapes set a new mark for the best in strength, protection, absorbency, and ease of use.

GRI-Alleset’s SteriGuard® Surgical Drapes are a breakthrough in design, delivering optimal ease of use, unmatched protection and surgical site isolation for creating and maintaining a sterile field. No matter the procedure type, SteriGuard® combines superior barrier definition, absorption, and strength, to ensure that placement is easy and that drapes remain in place during surgery.

Combining advanced fabric technologies and unique manufacturing processes with strategic, intuitive design is helping SteriGuard® redefine the meaning of quality in the market. Making drapes with the best cost-to-quality value available, GRI-Alleset is taking Surgical Drapes to the next level.

**Advanced SMS Protects Patients From Infection**
Superior protection in the critical zones provides excellent barrier protection from fluid strikethrough and minimizes the risk of cross-contamination and infection.

**Low Lint Technology**
Each drape utilizes a low linting, three-layer polypropylene non-woven fabric to minimize lint particle generation, which can contribute to bacterial transmission or foreign body contamination.

**2 in / 5 cm Tape**
SteriGuard® utilizes 2 in / 5 cm medical tape for improved drape placement and drape security.

**Precision Adhesive**
GRI-Alleset’s EdgeGuard technology allows medical-grade adhesion to be applied to the very edge of the fenestration, ensuring precise placement, security of the surgical drape, and fluid management.

**Strong and Durable SMS**
GRI-Alleset surgical fabric is constructed with three layers of SMS, making it highly resistant to tears and abrasion.

**Advanced Fluid Management**
GRI-Alleset’s HydraGuard® reinforcement fabric provides high fluid absorbency around the fenestration to promote fluid management. GRI-Alleset surgical drape pouch and pocket designs allow for advanced fluid management and efficient clean up.

**Low Flammability**
State-of-the-art fabric technology provides superior resistance to flame protection that can be caused by the use of high-energy medical devices during surgery.

**Easy To Use**
Starting with carefully coordinated packaging, SteriGuard® drapes are easily and aseptically opened to manage and maintain a sterile field.

* Representative products were tested according to ASTM D5511: Standard Test Method for Determining Anaerobic Biodegradation of Plastic Materials Under High-Solids Anaerobic-Digestion Conditions. The results showed a 31% biodegradation of the polyethylene film after 566 days. Actual break-down times will differ based on many variables such as exposure to moisture, air and sunlight.
